

Managing Traffic Enforcement Programs

The Maryland Chiefs of Police Association is now offering a 40 hour training course entitled **Managing Traffic Enforcement Programs**. This comprehensive instruction is designed for supervisors and patrol officers tasked with managing all aspects of a law enforcement agency's highway safety services.

At the conclusion of this training students will . . .

- Be able to identify the State's overall Highway Safety Mission
- Identify the components of a comprehensive selective traffic enforcement program (STEP)
- Understand the role and relationship of the three elements of highway safety (engineering, enforcement and education)
- Be able to identify and access data sources, and use available data to implement and evaluate a traffic safety program
- Be able to develop an action plan and set goals & objectives for an effective traffic safety initiative
- Have completed a STEP Project utilizing the concepts and information learned.

This course will include training modules on basic traffic engineering concepts, Public Information & Education, and developing a highway safety and enforcement culture. Instruction will be provided by nationally recognized police traffic commanders, Federal & State Highway Safety officials and traffic engineers.

The training will be offered across the state on a regional basis over the next twelve months at no charge to law enforcement agencies. Exact dates and locations of the training will be announced. **Successful completion of the course earns students forty hours of MPCTC in-service credits.**

For further details on training dates and registration information please contact Mr. Lenny Armstrong, Law Enforcement Liaison at the Maryland Highway Safety Office at 410-787-4067 or larmstrong@sha.state.md.us.
